Objective:

To secure a challenging position as a Intern Rust Developer at a startup where I can apply my programming expertise, problem-solving skills, and passion for building efficient and scalable systems from scratch.

Professional Summary:

- A technology-driven professional offering with over 1.3 years of expertise in **Software Testing (Web application and Standalone applications) and quality assurance.**
- Have experience working on projects created utilizing Agile Scrum approaches and using Java, Jenkin, Maven, Jira, TestNG, and Selenium Web Driver for test automation.
- Eager to learn Rust development with a background in software testing.
- Basic understanding of Rust, including systems programming, memory safety, and concurrency.
- Motivated to grow and improve as a Rust developer.

Roles and Responsibility:

- Developing and optimizing high-performance systems using Rust.
- Writing safe, concurrent, and memory-efficient code.
- Conducting unit testing and debugging to ensure code quality and reliability.
- Collaborating with developers and product teams to define software requirements and design specifications.
- Automating testing and deployment processes using CI/CD tools.
- Code review and performance analysis to ensure adherence to best practices and coding standards.
